

# MIGHTY BRIGHTY™

Enjoy the big screen experience!

## Spraying Instructions Mighty Brighty Projection Screen Paint

### Before you begin:

1. Carefully read the following chapters in the instruction booklet:

Before you begin:

- The surroundings and temperature
- The surface upon which Mighty Brighty will be applied

2. Cover the side-walls, floor and ceiling with paper or plastic sheets.

3. Remove or cover objects (e.g. chairs) with paper or plastic foil. Some overspray during spraying can adhere on the objects.

### Recommended Equipment:

#### Undiluted

##### BaseCoat

We recommend using an electric airless type of pump; Graco 495 II (costs ± € 3.100) with spraying-angle of 60° and spraying-nozzle of min.0,015". Pressure appr. 200 bars. Maximum sprayer snake 16 mtr. Follow the instructions of the manufacturer.

Keep the gun at a constant distance (appr. 25 cm) from the wall.

Release the trigger at the end of each stroke.

Then, depress the trigger and overlap the previous stroke by about 1/3.

Continue for consistent coverage.

After drying (ca. 60 minutes) apply a second (cross-)layer of BaseCoat.

##### TopCoat

Follow the same procedure as for the BaseCoat.

The recommended pressure will be 180 bars.

#### Diluted

##### BaseCoat

Dilute BaseCoat with appr. 15 - 20 % water.

We recommend using the Graco 4900 Compression Turbine (costs ± € 1.700) in combination with a High Volume Low Pressure gun with a 2 mm tip diameter. Adjust the air/paint mixture in the optimal manner for consistent coverage using about 0,5 bars pressure. Follow the instructions of the manufacturer.

Keep the gun at a constant distance (appr. 15 cm) from the wall.

Release the trigger at the end of each stroke.

Then, depress the trigger and overlap the previous stroke by about 1/3.

Continue for consistent coverage.

After drying (ca. 60 minutes) apply a second (cross-)layer of BaseCoat.

##### TopCoat

TopCoat will **not** require dilution. Follow the same procedure as above for the BaseCoat.

Remark: In case of using a compressor in combination with HVLP guns, you will have to use compressors with high capacities ( min. 500 ltr air/min.).
